IMPORTANT INFORMATION

QUALITY SERVICES & CUSTOMER SATISFACTION

To provide "Excellent services and economically prices" is the motto of our business. All instruments are made of stainless steel other wise specified.

All instrument are stamped with words "stainless Pakistan or any other country to whom manufactured buyers own brand may also be engraved on demand, "Die-Sunk" procedure is generally used.

Special items can also be supplied if sketch, drawing or samples are provided to us or refer any reference from reputed catalogue for our guidance.

All kind of Surgical instruments of stainless steel made the specific material according to its use.

Specification of material used in production.

Cutting Instruments

For (scissors, Cutter)	Stainless steel AISI-410/420 (Rock-well hardness-48 to 58) Hot drop forged
For (Forceps, Holding Clamp)	Stainless steel AISI-410/420 (Rock-well hardness-42 to 48) Hot drop forged
For (Scalpel, Handles)	Stainless steel AISI-420 (Rock-well hardness-48 to 58) Hot drop forged
For (Speculums, Retractors)	Stainless steel Sheet-300 Series 18/8 (18% Chromium & 8% Nickel)

Please Note:

The delicate, hand-crafted surgical instrument use only for its intended purpose to Ensure effectiveness and maximum life. Proper care must be given during cleaning, sharpening and sterilization to preserve design and integrity and to prolong usefulness. Do not expose instruments to sterilization temperatures above 350° F/177°C or to higher than recommended chemical concentrations." Longer Life for Surgical Instrument" for proper cleaning, sterilization and other instrument care.

Inspected the instrument after each use for: pitting; corrosion; discoloration; broken, loose or bent components; cracked handles; dull cutting edges; over sharpened or worn out blades; chipped or peeled plating; damaged hinges, beaks or blades. Instruments found to Have these or other compromising conditions should be removed from service.

QUALITY MANAGEMENT SYSTEM

Surgicell Industries. is an employee owned company of Craftsmen and has got a good reputation for quality and reliability. Our significant manufacturing steps are being described here-under briefly:

1. **MATERIAL TESTING:** The purchased raw material is thoroughly tested under PQA. authority. A rigid quality control policy is being adopted before releasing to production. This test is taken to check the standard of steel as per desired specifications and is considered the most important factor of our business.
2. **FORGING & HAMMERING:** After testing, the stainless steel strips/bars are divided into different sizes as per our requirements and our highly experienced craftsmen are specialized in forging (Hot/Cold Drop) to perform all standard press operations in forming and deep drawing of all type of instruments. We anneal the forging and prepare for the milling process.
3. **MACHINE & TOOL WORK:** Our highly skilled technicians have a great knowledge about machine milling process. We form accurately male/female portion of box-joint forceps, as well as, serrations/ratches in uniformity. We are equipped to mill, drill, bore turn and grind all type of metals. We have in house facility of custom tool and die production, maintenance and repair.
4. **FILLING:** We are specialized in handmade fabrication. First, we assemble male/female portion after setting/adjusting of Extracting Forceps and Scissors, tips, serrations, ratches in uniformity and file precisely to make it semi-finish under strictly quality control specifications.
We are now moving from basic hand manufacturing techniques to mechanization to production run.
5. **HEAT TREATMENT:** All instruments are being tempered maintaining "Rock-Well Hardness" for Extracting Forceps & Retractor 45° to 50° degree and Scalar, Gauges and Scalpel 50° to 55° degree. A test is taken to check the hardness after tempering of each lot to maintain the uniformity and, before proceeding further, we clean all instruments by various chemicals. In addition, we will buy specialized Q/C equipment in near future to meet special customer Q/C. Specifications.
6. **RIVETING & WELDING:** We perform a wide variety of assembly operations from prototype quantities to production run. We rivet precisely each instrument such as, Extracting Forceps & Retractor, etc. But, for some kind of instruments, we use spot welding.
7. **GRINDING & POLISHING:** For precise grinding and excellent finish, we specialize in applying polishing wheels to belts to improve the overall finish in high uniformity utilizing best of polishing luster. We use electro-plating plants to polish serrations/ ratches and joints of stainless steel instruments. For satin/matt finish instruments, we use glass heads to achieve uniformity. All instruments are being polished under rigid quality control specifications.
8. **PASSIVATION:** This method actually provides the instruments with its corrosion resistance properties. Passivation, which follows the final polishing step, is a chemical bath, which creates an oxidized layer on the surface of instruments. We are now equipped with most modern process.
9. **ULTRASONIC CLEANING:** We are full equipped with most modern ultrasonic cleaning plants imported from "Branson Cleaning Equipment Co. USA", and all instruments are being cleaned properly utilizing various chemicals such as, Tri-Chloroethylene etc.
10. **INSPECTION & STAMPING:** We inspect all instruments under rigid Q/C. specifications and give the assurance to our relative clients that all instruments shall be free from all defects such as, burrs, sharp edges, cracks, pitting, scratches, grease / excessive oil and foreign matters etc. We also guarantee for its workmanship. For stamping, we use both process i.e. die sunk and electrolytic marking and are being marked under customer's specifications.
11. **PACKING, LABELING AND BAR CODING:** We pack all instruments under strictly Q/C. specifications as per customer's demand. Normally, we pack individually in poly bag and further 12 pieces in one box mentioning outside with Part Number, Description and Lot Number. All instruments are packed in poly bags/plastic/colour bags, Blister Packing with adequate desiccant in each poly bag to absorb moisture. We are specialized in packaging, labeling and bar coding as per customer demand.

What Is The Function of Extracting Forceps : To Remove Teeth From Bony Socket

Extraction Forceps

Dental forceps are pliers-like instruments that are used to grasp teeth.

A dentist will usually have a number of different ones on hand, each having a design that's tailored to:

The specific shape of the tooth it's intended to remove (such as incisors vs. molars having two roots vs. molars having three roots).

The location of the tooth in the mouth (such as front vs. back, or left lower molar vs. right upper molar.)

How they're used.

A dentist will grasp a tooth with their forceps and then firmly and deliberately rock it back and forth as much as it will.

Because the bone that surrounds the tooth is compressible, the socket will gradually start to expand.

As it does, the range of the dentist's side-to-side motions will increase.

In addition to this rocking motion, the dentist will also rotate the tooth back and forth.

This twisting action helps to rip and tear the tooth away from the ligament that binds it in place.

At some point, the socket will be enlarged enough, and the ligament torn away enough, that the tooth can be easily removed.

EXTRACTION FORCEPS # ATRAUMATIC

Forceps "Blade Beaks"

1. "Blade Beaks" smoothly penetrate in contact with the root.
2. They has large contact surface for a secure grip.
3. They take care of the tissues and assure tooth fracture risk reduction.
4. They give better control over the root during the extraction operations.

EXTRACTION FORCEPS # SECURE

Secure-Line Extraction Forceps

These forceps will allow you to complete any extraction and work more efficiently even if complications arise. If teeth break during extraction, these are the tools you need to rapidly, safely solve your problems. These forceps have special, all-purpose, jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissues by lightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.

ROOT ELEVATOR

HANDLES FOR ROOT ELEVATORS POINTS A, B, C, D, E, F

ROOT ELEVATORS

Function of Root Elevators: To loosen tooth or root from bony socket prior to placement of the extraction forceps.

Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver.

That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

LUXACUT

Luxacut Luxation Instrument

Over recent years, there has been an increased demand for reduced trauma during extraction procedures. The use of elevators has become widespread for the loosening of teeth before the application of forceps. Luxation instruments tips are more finely tapered than elevators tips. Their characteristics are a combination of a Periotome and an elevator. The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket. The extraction operation may be performed with the minimum amount of tissue damage. Healing is therefore quicker and the operation is less distressing for the patient and surgical team alike.

The Luxacut Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in Three different widths. Also available in dual edge blades

- **SI2196-L2S** Straight Blade- Green-2 mm- Apical and/or Interproximal
- **SI2198-L3C** Curved Blade- Black- 3 mm General use/Starter
- **SI2197-L3S** Straight Blade- Grey- 3 mm Interproximal
- **SI2200-L3CA** Contra Angle- Blue- 3 mm Lingual and/or distal-Molars
- **SI2199-L3IC** Inverted Curved- Light Blue- 3 mm- General, Lingual and/or Distal
- **SI2202-L5C** Curved Blade- Brown- 5 mm- Large molar roots-General use
- **SI2201-L5S** Straight Blade- Yellow- 5 mm- Interproximal
- **SI2203-DE3** dual edge/straight grey 3 mm/1.5 mm
- **SI2204-DE5** dual edge/straight brown 5 mm Deep fractured/Decayed Roots

SURGICELL Dental Hand Instruments

The types of hand instruments can be categorized based on their function:

- Examining the mouth and teeth
- Scaling or professional cleaning of teeth
- Cutting teeth and removing cavities
- Placing and condensing filling materials
- Carving and finishing dental fillings
- Miscellaneous types
- Instruments used for examining the mouth and teeth

Mouth mirrors are used to examine the condition of the teeth and mouth, as well as to retract the tongue and cheeks upon examination.

Probes— There are many probes available but the main types are the straight probe, Briault probe and periodontal probe.

The straight probe is sharp and it is used to examine cavities in the dentine region as well as to check the margins of restorations or fillings.

The Briault probe is also sharp and it is used to detect the junction between the enamel and dentine. Briault can also be used to detect tartar hidden in the gum pockets.

A periodontal probe can be used to measure the depth of the gum pockets and for other measurements. Instruments for cutting and scraping tissues and deposits

Scalers remove tartar (calculus) on the tooth surface as well as those hidden in the gum pockets. They can also be used to remove other surface deposits and temporary crowns.

Excavators are used to remove softened dentine and temporary fillings. The back of the blade can also be used for placing linings between filling materials. Sometimes excavators can be used for carving metal or amalgam fillings.

Chisels are used to remove unsupported enamel during cavity preparation. Unsupported enamel can be harmful for it can compromise the longevity of the filling if not removed.

Hatchets and hoes have similar purposes to chisels. Instruments used for placing and condensing filling materials Plastic instruments convey and shape filling materials and are usually flat blades that do not use heavy pressure.

Some instruments have rounded ends for shaping and burnishing the surfaces of fillings. Plastic instruments are usually made of stainless steel for most materials though there are also thin Teflon-coated or titanium nitride instruments which are non-stick for composite fillings. **Condensers or pluggers** are used for compressing and forming filling materials. Heavy pressure is applied on use therefore these instruments are usually used for metal or amalgam fillings. Instruments used for carving and finishing fillings Carving and finishing instruments have sharp or semi-sharp blades of various shapes. They are used to carve materials by cutting and scraping.

VALUED BUYERS

Compare our scalers and curettes with the best in the industry and you will immediately recognize we are equal in every way but one... price. Note the deep precision knurling for better tactile feel. The same high-grade stainless steel tips, the same light weight (under 20 grams) for less hand fatigue, the same professional craftsmanship, and surpassing the highest industry standards. Of course, any manufacturer can make these claims, but we guarantee and certify ours. We regularly manufacturing below articles in showing handles & pattern for better grip & perfection. We are also fully equipped & capable to develop these instruments as per your own specific requirements & demands in materials, sizes, shapes and patterns.

Angular shaped excavator with rounded tip

SI3373

The **2 Glick Endo Excavator** is a popular instrument for easy access and removal of dentin.

SI3374

The **31W Endo Excavator** features an extended length shank for easy access and removal of dentin.

SI3375

The **31L Endo Excavator** features an extended length shank for easy access and dentin removal.

SI3376

The **32L Endo Excavator** features an extended length shank for easy access and removal of dentin.

SI3377

The **33L Endo Excavator** features an extended length shank for easy access and removal of dentin.

GINGIVAL CORD PACKERS

GINGIVAL CORD PACKERS
For atraumatic and accurate cord placement.

SI3378 BN1 Thin blade and rounded contour facilitates use in both thick and thin tissues without catching or dropping cord. Bilateral notch allows placement in limited access areas.

SI3379 S6 Ideal blade thickness with angle and blade shapes similar to the IPC carver.

SI3380 CSI-1 Serrated Also available non-serrated CSI-1 (GPCSI1NS).

SI3381 113 Serrated Also available non-serrated 113 (GCP113NS).

SI3382 Balshi Small and thin non-serrated blade shape.

SI3383 1 Yardley Round non-serrated working end.

SI3384 7 Guyer Serrated Also available non-serrated 7 Guyer (GCPG7NS).

GCP56 accurate cord placement with minimal tissue trauma

CARVERS

Used to carve anatomical features and trim excess materials.

SI3416 Inter-proximal Extremely thin, flexible blade; ideal for interproximal contouring.

SI3417 Inter-proximal Off-Angle Extremely thin, flexible blade. Off-Angle provides better access to posterior areas.

SI3418 1/2-3 Hollenback Universal adaptability. Ideal for placing, carving and contouring amalgam.

SI3419 3S Hollenback Design characteristics similar to 1/2 Hollenback but with slightly larger blades.

SI3420 3 Hollenback Design characteristics similar to 1/2-3 Hollenback but with significantly larger blades.

SI3421 8 Wiland Minn.IPC1 Extremely thin curved blade; ideal for adapting to interproximal surfaces.

Maxiofacial Surgery Instruments

A Bard-Parker handle with a No. 15 blade is the usual scalpel used to make incisions on the gums where a flap can be raised to gain access to tooth.

Retractors

Tongue, cheek and flap retractors are needed to provide adequate access to the tooth and are legion in number.

Needle Holders and Sutures

Sutures are used to replace and secure the gum flap in its former position, to limit the size of the wound and therefore restrict subsequent contamination with food debris, and to assist in controlling bleeding. The usual suture size for intra-oral work is 4/0 and the material may be absorbable or non-absorbable Scissors Dissecting scissors and suture-cutting scissors are usually used.

Artery Forceps

These are designed to hold soft tissue without damaging it. College tweezers are used to lift up sutures prior to removing them.

Periosteal Elevators

A number are available and are similarly used like a normal elevator but periosteal elevators have two heads – one at each end. One end is sharp-tipped to expand the tooth socket while the other has a blunt end to remove granulation tissues or raise a gum flap.

Chisels and Mallet

Chisels are more appropriate in the operating theatre and are particularly useful for disto-angular third molars and upper wisdom teeth extraction.

Bone Curettes

The Mitchells trimmer is probably the most valuable instrument in the category and is used to remove granulation tissue in the tooth socket.

Bone Ronguer and Bone File

Used to smoothen any sharp bone edges after tooth extraction is done.

Terms of Use

Removal of:-

- Permanently cemented crowns and /or bridges
- Temporarily cemented provisional or inal restorations
- Maryland bridges
- Orthodontic brackets/bands
- Removable appliances "stuck" at attachments
- Multi-unit restoration "stuck" on working lab model

Basic Kit Includes:-

- Crown and Bridge Remover # SI4316 / SI4317
- Single crown remover tip # A
- Crown remover tip Biid # B
- Crown & bridge removing tip Sickle # C
- Single crown remover Contra angle tip # D
- Single crown remover tip Inverted curved # E
- Single Crown remover tip straight # F

- Bridge remover Flexi-wire set # SI4318
- Bridge remover tip with lock # SI4319
- Tips adjustment Key # G
- Open-end adjustment wrench # H

Precautions

1. To remove crowns placed over pins or screw-type posts, use lowest "strike intensity" to prevent fracture.
2. This instrument could cause damage to the margins of soft gold crowns. If re-use is anticipated, cut a small groove parallel to the lingual margin.
3. Highest strike intensity could cause root fracture; be careful in long span restorations.
4. Only low intensity strike force should be used with teeth having high mobility and little bone support.
5. For highest strike intensity settings, let the individual situation and common sense prevail.

orthodontics pliers in Clinical Dentistry Orthodontics and Dentofacial Orthopaedics

Driven by the demand for tooth alignment, general practitioners are increasingly being asked to provide orthodontic treatment.

Dentists keen to participate in this area of expertise need to demonstrate the skills to identify suitable patients, the ability to provide conventional and contemporary orthodontic treatment and be aware of its limitations.

This is exactly what this programme delivers, along with the vital core competencies to excel in this unique postgraduate area.

The objective of the Orthodontics and Dentofacial Orthopaedics is to provide dental surgeons with the core knowledge and clinical skills essential for the delivery of competent, high-quality dental care.

It encompasses a blended learning approach and consists of a combination of lectures, seminars, workshops, clinical case discussions and laboratory sessions.

The flexible modular structure enables the programme to meet a wide range of student needs.

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincers pour l'orthodontie et la prothèse
- Zangen für Kieferorthopädie und Prothetik
- Щипці для ортодонції та протезування
- Alicates para ortodoncia y prótesis
- كماشة لتقويم الأسنان بروتستيس

SI5001
Cap Removing Plier

SI5002
1-Distal End Cutter
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity.
arch wires up to .021"x.025"(.55mx.64mm)

SI5003
1-Distal End Cutter Flush Cut with Safety Hold
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity.
arch wires up to .021"x.025"(.55mx.64mm)

SI5004
Micro Ligature Cutter
Maximum Cutting Capacity.
.008" (20mm)
Maximum Cutting Capacity.
.012" (30mm)

SI5005
1-Distal End Cutter Flush Cut
This instrument cut wires close to the buccal tube and safely holds the distal end. The tungsten Carbide insert ensure precision cutting, long wear and unsurpassed cutting performances.
Maximum Cutting Capacity.
arch wires up to .021"x.025"(.55mx.64mm)

SI5006
Hard wire cutter 15° Degree Angle
Easily Cuts any Size arch wire or Pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting and perfect tip alignment. Minimum Cutting Capacity.
.012"(30mm)
Maximum Cutting Capacity:
arch wires up to .012"x.025"
(.55mmx.64mm)

SI5007
Hard wire cutter Standard Straight
Easily Cuts any Size arch wire or Pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting and perfect tip alignment. Minimum Cutting Capacity.
.012"(30mm)
Maximum Cutting Capacity:
arch wires up to .012"x.025"
(.55mmx.64mm)

SI5008
Hard wire cutter, easily cuts any size arch wire or pin. The inserted tips ensure precision cutting and perfect tip alignment.
Minimum Cutting Capacity: .012"(.30mm)
Maximum Cutting Capacity:
arch wires up to .021"x.025"(.55mmx.64mm)

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincettes pour l'orthodontie et la prothèse
- Zangen für Kieferorthopädie und Prothetik
- Щипці для ортодонції та протезування
- Alicates para ortodoncia y prótesis
- كماشة لتقويم الأسنان بروتستيس

SI5009

Pin Ligature cutter 15° degree angled tips to allow easy access and better visibility to reach in Difficult areas. Inserted tips ensure precision cutting of Ligature wire, pins and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .016"(.41mm)

SI5010

Standard Ligature cutter

This cutter has fine tips for easier access to reach difficult areas cuts pins, wire ligatures and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .016"(.41mm)

SI5011

Mini Ligature cutter 50° degree angled upper the narrow tip is angled at 50° degree for excellent access to the upper arch. The inserted tip ensure precision cutting of ligature wires and elastics. Minimum Cutting Capacity: .008"(.20mm) Minimum Cutting Capacity: .012"(.30mm)

SI5012

Bracket Removing Plier Angled TC - inserts Sharp beak wedge can easily go under bracket base. Lifts off bracket from tooth surface with no discomfort to patient. Firm grip assures, easy in horizontal and vertical use.

SI5013

Ligature wire forming plier for soft wires up to .014" (.36mm)

SI5014

Crimpable Hook Plier TC inserts The head of these pliers is designed with a slot to fit over the base of the hook for a secure hold. One squeeze and the hook is secured on the arch wire.

SI5015

Cinch back plier

The Serrated tips of this instrument hold the wire securely while bending the wire 90° degree distal to the buccal tube, avoiding patient for use with Nickle Titanium wires .012"x.018"(.30mmx46mm)

SI5016

Johnson countouring plier

Design to add contour or Curvature by crimping trail-fitted Crowns. This Contouring / crimping ensures that the crows fits securely on the patients tooth. slim weingart pliers

SI5017

Adams Plier 325 with hole for retaining elements

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincers pour l'orthodontie et la prothèse
- Zangen für Kieferorthopädie und Prothetik
- Щипці для ортодонції та протезування
- Alicates para ortodoncia y prótesis
- كمانشة لتقويم الأسنان بروتستيتيس

SI5018

How Plier (straight)

A versatile utility plier with a long tapered tips and have serrated tips (Also available) in TC-Tip to prevent wire slippage.

Point Size: 2mm,4mm
Also Available in TC-Tip

SI5019How Plier (Cvd)

Similar to How Plier (straight) but with 45° degree angled tips for convenient access to lingual and to reach difficult areas. Matching serrated tips hold wires firmly at a convenient working angle.

Point Size: 2mm,4mm
Also Available in TC-Tip

SI5020

Direct Bond Remover (Angled)

Some Features as Direct Bond Remover plier (straight) except the 60° degree angle allows easier access in those to reach difficult posterior areas.

SI5021

Direct Bond Remover (straight)

Force is applied to the bracket tooth interface. The tips are positioned mesially, distally or at the occlusal gingival interface to remove direct bond brackets Safely and Comfortably.

SI5022

Posterior Band Remover (Long)

Some features as posterior band remover plier (short) but with a longer lower band removing arm. Replacement pads are available in 3/16" and 1/8" (4mm) diameters.

Also Available in TC-Tip

SI5023

Posterior Band Remover (Short)

The plastic pad rests on the occlusal surface of the molar which positions to the lower removing tip in the perfect position under the gingival edge of the band. Replacement pads are available in 3/16" and 1/8" (4mm) diameters.

Also Available in TC-Tip

SI5024

Weingard Plier Slim

Precision serrated tips are designed for heavy wires and to prevent the wire from slipping. For easy and safe insertion or removed of all arches.

Holds wire up to .030"(.76mm)
wire bending capacity: .030"(.76mm)

Also Available in TC-Tip

SI5025

Weingard Plier Utility

Carefully tapered beaks fit easily between brackets and are rounded for safety and comfort. Holds round, Square and rectangular wires up to .22"x.028"(.56x.71mm)

Also Available in TC-Tip

SI5026

Torque Bending Plier Pair use

Designed to place a torque in a specific section of arch wire with out distortion in the reminder of the wire. The pliers use a key (either.016"/.018" or .018"/.022) that torque the section between holding beaks. Labial and lingual torque can be Placed Adjacent to each other easily. Torque can be limited to single tooth.

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincers pour l'orthodontie et la prothèse
- Zangen für Kieferorthopädie und Prothetik
- Щипці для ортодонції та протезування
- Alicates para ortodoncia y prótesis
- كمانشة لتقويم الأسنان بروتستيتيس

SI5027 Tweed plier slim

Designed for placing first, second and third order bends wires up to .022"x.025"(.53mmx.64mm)

Also Available in TC-Tip

SI5028 Lingual Arch Bending plier

Grooved to hold Several Sizes of wire, Jaw Thickness is .12"(3.05mm) Ideal for double and triple back bends. Bends round, Square and rectangular wire up to .036"(0.9mm)max.

SI5029 Band Crimping Plier

This tips allow for easy access into molar and premolar bands.

SI5030 Tweed Arch Forming Plier

Designed for torquing and bending square or rectangular wires. The blades are designed to be parallel at .020" opening. Can be used on wires up to .021"x.025"(.55mx.64mm)

SI5031 Jaraback Pliers

Long, tapered design with fine detail work on serrated tips allows for intricate bends and utility work. Tip sizes are .028" for round and half-moon. Wire bending capacity: .028"

SI5032 Tweed Loop Forming Pliers

The perfect plier for making accurate, omega and closing loops. can be used with round & square wire up to .021"x.025" (.55x.64mm)

SI5033 Young Plier

For labial, lingual, arches and Canine loops. For hard wire up to .028"(0.7mm) max. wire Bending Capacity (.028"(0.7mm) C-1280 Aderer Small (3 jaw plier Small) Same features as the 3 jaw plier but with Slightly Smaller tips for working with wire up to .020"(.51mm) wire Bending Capacity (.020"(.51mm) C-1281 Aderer Precision aligned tip are rounded for consistent contouring and bending without damaging the archwire. One-piece construction for the double tip ensures Superior strength. Can be used on wire up to .030"(.76mm) wire Bending Capacity .030"(.76mm)

SI5034 Nance Plier

Precision loop forming with four step tips 3mm, 4mm, 5mm and 6mm, Excellent for round and square wires up to .022"(.56mm) All working edges have been beveled to prevent wire Scoring. wire bending capacity. 022"(.56mm)

SI5035 These Multipurpose Specialty Pliers

are used for easily forming stops, tie backs, or Adams clasps for retainer.

PLIERS FOR ORTHODONTICS & PROSTHETICS

- Щипцы для ортодонтии и протезирования
- Pincers pour l'orthodontie et la prothèse

**SI5036
V Bend Plier**
Creates a 1 mm v bend to any part of the archwire. Provides positive stops and prevent archwires from "walking"

**SI5037
De la Rosa with three Grooves
Arch contouring and forming plier**
with three grooves, for wires .016", .018" and .022"

**SI5038
De la Rosa without Grooves**
perfect for Subtle Contouring of arch wires up to .030" (.76mm)
wire Bending Capacity: .030" (.76mm)

**SI5039
Adams plier with Hole**
Sling Claps and wire bending pliers
Also Available in TC-Tip

**SI5040
Slim Bird Beak Plier**
This popular loop forming and bending plier has inserted tips that provide excellent wear. The precise round and square tips bend arch wires from .012" to .020" (.30mm-.51mm)
Wire bending capacity: .020" (.51mm)
Also Available in TC-Tip

**SI5041
Bird Beak Pliers**
The most popular and versatile plier for working with round wire up to .028" (.71mm). The round beak is precision manufacture to a perfect cone wire bending capacity: .028" (.71mm)
Also Available in TC-Tip

**SI5042
Light wire Bird Beak Plier**
A longer cone than a standard bird beak is useful for forming precise loops in light wires up to .020" (.51mm)
wire Bending Capacity: .020" (.51mm)

**Aderer SI5043
11.5 cm, SI5044
13cm**

STEP 1 A hole is drilled for the implant. A cover screw is put in and left till the bone fuses and is ready for the implant.

STEP 2 The cover screw is removed in readiness for the next stage.

STEP 3 The abutment is attached to the implant.

STEP 4 The final stage where the crown (prosthetic tooth) is attached.

Dental Implant

Instruments for dental implants are made of high quality stainless steel.

Our line of instruments include, but is not limited to, the following products:

Bone Grafting Instruments

- Bone Curettes (SPRATT) – designed for harvesting bone
- Bone Grinder – used in conjunction with a mallet to grind bone into appropriate particle sizes
- Bone Basin – weighted bottom design prevents tipping or spilling while mixing bone or other

bone grafting materials

- Bone Compactors – feature serrated tips for compacting bone

Scalpels & Biopsy Punches

- Scalpels – offers convenience of a disposable with razor sharp cutting edge for superior cutting
- Biopsy Punches – designed at a steeper angle to ensure a finely honed, sharper edge
- Bone Spreading Chisels
- Freer Chisels – double or single cut tips used for widening ridges during implant preparations

- Graduated Chisels – feature reference markings for measurement during a bone ridge augmentation and are available in straight and curved patterns

Osteotomes

- Concave Osteotomes – break the floor of the maxillary sinus through the implant cavity and are available in curved (off set) and straight (with or without stops)
- Convex Osteotomes – raise the floor of the maxillary sinus and are available in curved (off set) and straight patterns (with or without stops)
- Progressive Osteotomes – designed to prepare the implant site in the maxillary area where bone density is 3 or 4
- Bone Spreading Osteotomes – sharp or blunt configurations for progressive circumferential expansion of the implant site

Sinus Lift Instruments

- Sinus Lift Curettes and Elevators – lightweight, wide diameter stainless steel hand instruments lift the sinus membrane for bone augmentation procedures

Gauges & Calipers

- Gauges & Calipers – various measuring devices available to determine appropriate length, width, and distance for implant procedures

Collagen Products

- Collagen wound dressing product offering includes products.

Sterilization Trays

- Sterilization Trays – designed to protect and store instruments during sterilization, transportation and storage

If an implant cannot be set, since the diameter of the jaw is not sufficient, a piece of bone has to be implanted. The additional bone is extracted e.g. from the lower jaw. The bone piece is then locked onto the compound area with the straight forceps (front tooth sector).
